## Zallys - XT510 Electric Hydraulic Coffin Lifter

### ZALLYS HS

The XT510 is an electric hydraulic lifter to be used as a coffin lifter to bury coffins up to a height of 4100 mm. The XT510 is made by a solid steel chassis powder coated with paint. The gears in oil bath and the cabled wires make the vehicle hermetic and suitable for internal/external environments and very reliable in case of extreme weather conditions. The machine is very silent, small and compact, easy to manoeuvre assuring total security during the operator's work. The machine will help and assist the operator avoiding fatigue, time, and no worries on maintenance even in a frequent use. The two standard lead acid 80A traction batteries supply the machine sufficient energy to work for 8 hours, with a simple recharge it can be used again. The XT510 swivel tiller head is made with a safety sensor which allows it to work only in the presence of assigned personnel, supplied with forward/reverse speed lever controls, horn, bellybutton and on/off keys. The 800W motor is equipped with an electromagnetic brake that stop the machine preventing accidental slipping while on ramps at full load. The pneumatic wheels make the machine manoeuvrable and safe maintaining a strong grip on any kind of ground. The levelling and stability during the lifting phase is helped by 4 adjustable and unthreadable stabilizers to allow a larger support of the machine on the ground. The coffin's flat surface is equipped with lockable rolls for frontal scrolling and by stirrup to introduce the coffin sideways. The machine is capable to load and lift up to 350 kg including the operator and the coffin.

Machine length:	1977mm
Machine width:	750mm
Wheelbase:	1171mm
Capacity:	350kg
Lift Height:	4000mm
Turning Circle:	4000mm
